

Project Requirements

1 - Create two forms:

- Login form
 - Register form
 - Both forms must include JavaScript **validations** (required fields, email format, password rules).
-

2- Create a slider using pure JavaScript (Vanilla JS).

- Using JavaScript frameworks, libraries, or ready-made templates is **not allowed**.
 - CSS frameworks are allowed, but not for the slider , eg tailwind – bootstrap
-

3- The project must include products.

- Each product must belong to a specific category.
-

4- Implement product filters, such as:

- Filter by price
- Filter by size

Note : mohem awy 2alet en 3aleh daragat kteer

5- Add a cart icon to the website.

- When clicking the "Add to Cart" button or the plus (+) button on a product:
- The cart icon counter must update dynamically using JavaScript.

like → 

6- Create a Product Details page.

- Clicking on a product should navigate to a page displaying its details.

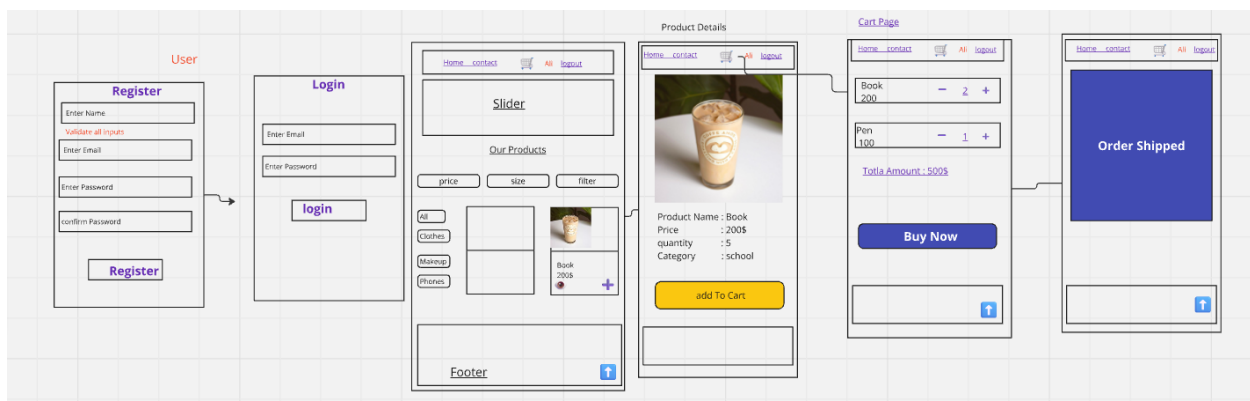

7- Create a Cart page.

- The cart page should display all products added to the cart.
- Add a "Buy Now" button on the cart page.
- When clicking "Buy Now", redirect the user to a new page that shows:
 - Order success message
- or
- Order shipped message.
